ENDORSED BY

AUSTRALIAN PHYSIOTHERAPY ASSOCIATION

## Bambach Saddle Seat™ with Backrest

- Backrest angle adjustment 30°.
- Backrest height adjustment 3" (76mm).

Prices for options when purchased with a chair. Please call for pricing on individual parts.

**SADDLE SIZES**

Saddle size is unrelated to body height. A very tall person may fit a medium saddle, while some very short people may need a large saddle.

*"Small" fits most children and some very small adults.*

*"Medium" fits most adults and teens.*

*"Narrow" has a "medium" fit in the rear, with a narrowed front end for people with hip joint abnormalities, stiffness, or limited hip abduction.*

*"Large" is preferred by many men and is also suitable for people (both male and female) with large thighs or pelvis.*

## Lift Options

- L2X** Xtra-Low pneumatic lift, black ..... N/C
- L2** Low pneumatic lift, black or chrome..... N/C  
*Seat height 18.5" - 23.5". Usually fits 4'0" to 5'2".  
Fits children under 4'0" with foot platform.*

# The Bambach Saddle Seat

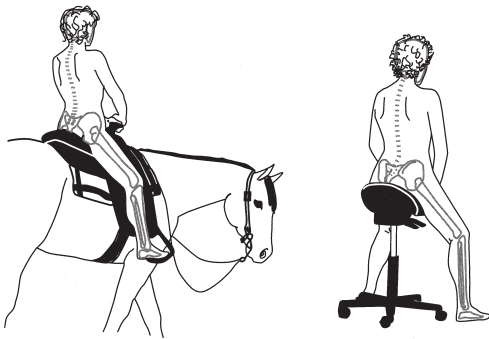

BSS 100 Series

BSS 200 Series  
with Backrest

## Improves Posture, Reduces Strain

The Bambach Saddle Seat promotes an upright posture that maintains your natural spinal curves. Your neck, shoulders, and legs are relaxed. Spinal disc pressures are reduced. The hip joints are in a resting 45° angle, just like sitting astride a horse. (Horseback riders who suffer back pain say they find relief when in the saddle). This is the way we were meant to sit: in balanced comfort.

The ideal sitting posture is on horseback. Hip abduction stabilizes the pelvis and trunk in a natural upright posture.

## The Ideal Work Chair

The Bambach Saddle Seat is ideal for those who do close work and reaching tasks. Its unique height and body positioning stabilizes your torso which improves your hand control and strength. And when you lean forward, you'll bend from the hips, not from your back, avoiding that slumping posture. Plus, Saddle Seat's unique design places your feet under your center of mass, allowing you to easily move the chair around when you work.

## For Patients and Professionals

The Bambach Saddle Seat is well-suited to both therapeutic and everyday needs. Patients with neck and back pain will often experience relief. And the Saddle Seat will dramatically improve balance. So much so that many disabled people who would topple out of a conventional chair, sit independently in the Saddle Seat.

The Saddle Seat is highly recommended for dentists, surgeons, assembly and lab workers, hairstylists, musicians, and many others who work with their hands. It allows them to work longer with less fatigue and discomfort.

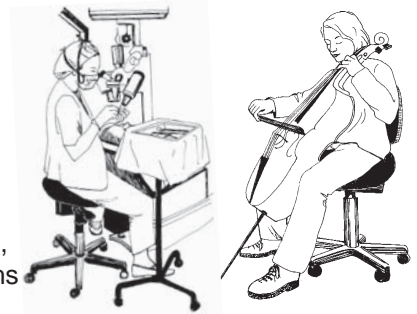

### It works for anyone whose job involves:

- viewing closely or at odd angles
- a lot of reaching
- moving your body along with your arms
- work spread out over a large area
- varying work heights
- dealing with heavy objects or forces
- long periods of standing
- getting up and down often from the seat

## Options and Features

The durable Saddle Seat comes with or without an adjustable backrest. The saddle fits most children and adults. Standard features include a swivel base, carpet casters, and tilt and height adjusters. The standard pneumatic lift fits most people from 5'1" to 6'1" tall. Fabric options are available for office, industrial, and surgical applications.

Additional options and accessories include lifts for children or shorter and taller users, hard floor and locking casters, sheepskin and washable cotton seat covers, footrings, and body support arms for dental assistants.

Bambach Saddle Seat maintains healthy spinal alignment with or without a backrest.
